

20 | LEADERSHIP 26 | CONFERENCE

Sekou Tyler

Founder, Royal Blue Analytics

Sekou Tyler is the Founder and Chief Executive Officer of Royal Blue Analytics, a consulting firm advising healthcare systems, insurers, nonprofits, and public sector institutions on the decisions that sit beneath their data and AI strategies. He works with executive teams and boards on the questions that matter most at the leadership level: where to invest, what to measure, who is accountable, and how to build the organizational discipline that turns analytics and AI from initiatives into outcomes.

A recognized voice across the modern data ecosystem, Sekou holds advanced expertise across the Microsoft Fabric, Tableau, Databricks, and Snowflake platforms, giving him a rare vantage point on how technology choices either accelerate or undermine executive strategy. His counsel is shaped by work with leaders navigating complex transformations, where the real challenge is rarely the technology itself but the clarity, governance, and trust required to make it deliver.

Sekou serves on the Board of Family and Children's Services and as a Board Officer for Creative Girls Rock, where he leads data and AI strategy for each organization, translating complex technical decisions into governance frameworks that boards and executive leadership can confidently act on. He is a frequent speaker at national conferences on the intersection of leadership, accountability, and emerging technology, and has been recognized across the data industry for his work bridging technical execution with executive judgment.
